

Near real time data availability ...

Apr 18, 2008

Are any of the LIS forcing data available in near real time? I have found Stage 4 supplemental forcing that is a few hours old at <ftp://ftpprd.ncep.noaa.gov/pub/data/nccf/com/hourly/prod>. What about the base forcing? The NLDAS data at ldas.gsfc.nasa.gov has up to 3 days ago only.

Thanks,

Clay,

I don't think the any of the current list of forcing options are available in near real time. The STAGE 4/STAGE 2/CMORPH and other precipitation datasets probably have the smallest lag time. GDAS forcing might have a small lag time as well. We are also looking at implementing GFS output as one of the forcing options. Let us know if you come across any datasets that could be used for real-time runs.
